SUMMARY

Product manager with six years across product and delivery, building platforms in regulated, high-consequence environments: national medical licensing, agricultural lending, and enterprise operations. Comfortable working from an ambiguous problem statement through discovery to a production system, usually with small engineering teams. Writes SQL against production data, owns integrations with external institutions, and has made AI a working part of how a product team operates. Product title since 2025; the six years span product, business analysis and programme management.

CORE SKILLS

Product discovery and user research | Roadmapping and prioritisation | Requirements, PRDs and specifications | Metrics definition and adoption analysis | Stakeholder management | Agile delivery and Scrum | SQL and reporting | API design and third-party integration | Frappe / ERPNext | Digital lending and payments | Offline-first field products | Regulatory and audit requirements | AI-assisted product operations

PROFESSIONAL EXPERIENCE

Product Manager, Agri & Enterprise

Waseela Global, Lahore | Mar 2025 - Present

- Own thirteen systems on a Frappe/ERPNext platform serving 40,000+ users and 150 field staff, spanning credit origination, procurement, warehouse receipts, production, laboratory, assets, HR and finance.
- Designed a crop credit product in which repayment is netted at harvest settlement rather than collected afterwards, making recovery a property of the transaction. PKR 150M+ deployed across 3,069 acres; PKR 540M+ of crop sales routed through the platform.
- Selected and negotiated Faysal Bank as financing partner, then designed the data flows and reconciliation logic between their Shariah-compliant warehouse receipt product and the electronic warehouse receipt system built in-house. Live 5 July 2026; approval to disbursement reduced from roughly seven days to same day. MoU covered in Dawn, February 2026.
- Consolidated an in-house operations application, an Odoo instance and a sprawl of spreadsheet trackers onto a single platform with one source of truth.
- Built offline-first field workflows after ride-alongs identified the product, not training, as the blocker. Over 80% of transactions are now captured on-device and data lag fell from days to same day.
- Introduced AI into the product operating model: PRD generation from live codebases, requirement analysis from screenshots, and an access layer over the ERP allowing product managers to query the system directly. Specification cycles fell from weeks to days. Deliberately excluded from credit decisioning.
- Built and deployed four internal products solo with no engineering allocation, all in production: the electronic warehouse receipt system, an AI-enabled farm management system, a laboratory dashboard and an executive dashboard.
- Delivered HRMS, payroll and finance for 300+ staff, live 1 July 2025. Payroll preparation fell from around three days to about one hour; petty cash tracked across 17 locations.
- Ran discovery directly: farmer interviews, ride-alongs with agriculture officers, a 36-role inventory of system users, and staged pilots before wider release. Personally trained 500+ farmers in Urdu across Jhang and Chiniot.

Technical Project Manager / Scrum Master

Waseela Global, Lahore | Feb 2024 - Mar 2025

- Ran Agile delivery across the product and engineering organisation, establishing the sprint cadence, release process and hiring pipeline still in use.

- Promoted into product ownership in March 2025.

Technical Program Manager

DCore | Sep 2023 - Jan 2024

- Designed the delivery model for the AgriTech and FinTech lines across eight engineers, and standardised technical onboarding and offboarding.

Business Analyst to Technical Program Manager

Rayn Group | Mar 2023 - Aug 2023

- Foundational team member of Kisaan, the platform later incubated as Waseela.
- Led requirements for Digital Digest, digitising the judicial database of the Supreme Court of Pakistan.

Business Analyst, acting manager of the software team

Pakistan Medical Commission, Islamabad | Mar 2021 - Feb 2023

- Led a team of 25 across engineering, QA, design and operations to build Pakistan's first digital medical licensing and examination infrastructure.
- Over 200,000 practitioners now license online. Turnaround fell from more than a month to under three days, physical visits by roughly 95%, and a paper backlog of 40,000+ applications was cleared.
- Sequenced licensing first because a practitioner who cannot renew cannot legally practise, and shipped MCB payment and challan collection in the same release as the forms, removing manual bank-slip reconciliation rather than relocating it behind a digital interface.
- Delivered Pakistan's first centralised medical admissions portal covering 97 colleges, credentialing across 128 private medical and dental colleges, and a central complaints system.
- Treated audit trails as a first-sprint constraint rather than a pre-review retrofit, and worked alongside long-serving operators to capture undocumented process exceptions before migration.

SELECTED SYSTEMS OWNED

- Crop credit origination, disbursement and settlement-linked recovery.
- Electronic warehouse receipt system, integrated with a commercial bank's financing product.
- Procurement with weighted average landed cost computed continuously and surfaced at the point of decision, moving deal go / no-go from days to same day across a multi-party supply chain.
- AI-enabled farm management system, with a knowledge engine reviewed by in-house agricultural scientists rather than a free-roaming model.
- Offline-first field operations for officers working across low-connectivity districts.
- Laboratory and executive dashboards, production and asset modules, HRMS, payroll and finance.

LANGUAGES

English (professional working proficiency). Urdu (native). Punjabi (native).

EDUCATION AND CERTIFICATIONS

BS (Hons) Mass Communication, National University of Modern Languages (NUML), Islamabad. 2015 - 2019. CGPA 3.29 / 4.00.

Google Project Management Certificate, 2024.
